THE MOBILE SERVERROOM

## *Who is ITAINER BV*

TAINER BV came into existence as a result of many years of experience in the design and construction of server space. We recognized that there was a need to be able to react quickly, both to calamities and to developments in the market.

After an extensive period of research, development and construction, ITAINER™ is now up and running.

## *What is the ITAINER™*

The ITAINER™ is a mobile server space provided with all the parts that are also present in a static server space:

- Possibility of more power sources (mains supply and generator, or two generators).
- UPS system.
- Fire detection.
- Gas blowout (Novec).
- Electronic access control.
- CCTV.
- Air conditioning and atmospheric humidity regulation.
- 19" casing.
- Separation of technical and client spaces.

The ITAINER™ is ready for immediate use upon delivery.

## ***When can the ITAINER™ be used***

The ITAINER™ can be used for different purposes. Take for instance fire damage to your current server space, or to compensate for a lack of space during the fast expansion of your IT environment, or so that you don't have to hide all your IT equipment under a desk during an event, but can position it centrally along with all the necessary facilities. We will be happy to pay you a visit to discuss whether the ITAINER™ can be used in your particular situation.

## ***What possibilities does the ITAINER™ offer***

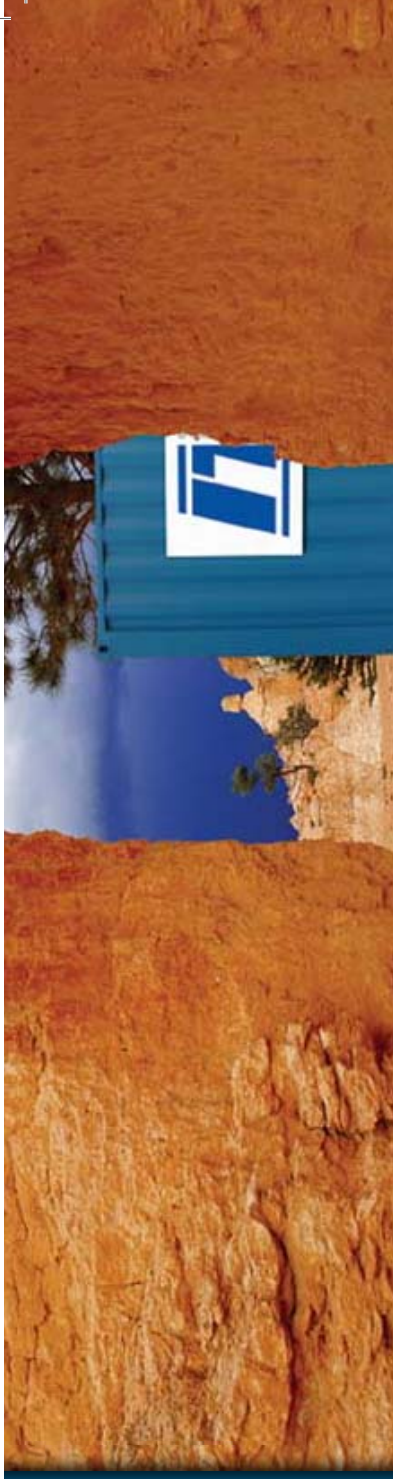

The ITAINER™ is able to operate fully autonomously. By connecting it to a mains supply and a generator, a back-up supply is always available. Should you choose to have your power supplied by two generators, then the ITAINER™ can operate without having to be dependent on a third party. This gives you more choice when deciding where to place the ITAINER™.

## ***Buy or rent the ITAINER™***

The ITAINER™ has been developed in order to take work off your hands. In addition, ITAINER BV can offer you the possibility to offload even more work. This is because the equipment can remain on our premises and we can carry out any necessary maintenance as well as ensuring that your ITAINER™ is not only delivered to the right location, but also connected and tested ready for use. Once your ITAINER™ has done its job, we will then disconnect it and return it to our premises. It will then be cleaned, checked and serviced. In this way, it will always be ready for further use.

Buy or rent? Both options are possible because the procedure mentioned above applies to both.

However, if you decide to buy then you will always have your own ITAINER™ at your disposal. If you decide to rent, then an ITAINER™ also used by other parties will be put at your disposal. We do have sufficient units available, but does your situation permit you to take the risk that you may not have one at your disposal when needed?

## *Offloading with the ITAINER™*

The idea behind the ITAINER™ and ITAINER BV is that our clients can offload work onto us. The moment you need the ITAINER™ we take everything off your hands. We arrange for transport, placement, connection and testing. When the ITAINER™ is no longer required, then we disconnect it and transport it back to our premises. This means that you can relax and have more time to carry out other activities.

## *Do the services stop the supply of the ITAINER™*

No, our services don't have to stop the moment the ITAINER™ is installed. We can go a step further.

What about the copper and glass network necessary to connect the ITAINER™ to the users of the existing environment. This is something else we can take care of quickly and professionally on your behalf.

And as if this isn't enough, we are also able to supply the hardware that is needed to be installed on the ITAINER™. Just give us a list of your requirements and we can supply them all. Certainly in emergencies, these additional services can prove to be indispensable.
